Dear Pharmacist Friends

- For the Prevention and Control of COVID-19, Pharmacies should Guarantee the Supply of Medicines including Antiviral, Antimicrobial, Antipyretics, Analgesics, and in the Hospitals the Corticosteroids and other categories of Medicines. Pharmacies should also Guarantee the Supply of Medical Devices (including Thermometers, Masks) and in the Hospitals other Protective Equipments e.g., Respirators, Gloves & Goggles which are used for Disease Prevention, Diagnosis and Treatment.

- Pharmacists in Pharmacies should be in charge of Procurement, Storage & Distribution of Medicines and need to adjust the Inventory to Guarantee the Supply for Clinical Practice.

- In situations of Home Confinement of Patients or Persons under Quarantine, Pharmacies can play an important role in ensuring Access to Medicines through Home Delivery, not only for the Treatment of COVID-19 but also for other conditions, such as long term Non-Communicable Diseases.

We together Fight against COVID-19
